

# Is your client's Tacoma compass/temp display (accessory meter) not working?

## WE WILL REPAIR IT *BETTER THAN NEW!*

**Siliconmethod.com:** We can repair your Toyota Tacoma compass / temperature display (accessory meter). What happens is that one or more tiny components (surface mount resistors and/or transistors) have separated from the circuit board, and the display darkens or operates intermittently.

To repair this issue, we install all new power resistors on the circuit board, not just the ones that failed. We also embed wire leads under the resistors to act as heatsinks. This has a dual purpose to lift the resistor off the board and allow airflow, further cooling the components ... preventing the issue from occurring again. We test the unit, and if necessary troubleshoot other component failures. After the repair is complete, we clean the glass and plastic interior surfaces.

**We only charge \$49 for the service, and that includes return shipping.**

## WE GUARANTEE IT.

If the display fails again due to power resistor issues within 3 years of our original work, we will repair it and ship it back to you for FREE!

### Here's the process:

- **You** (or your client) ships the accessory meter to us.
- **We** make the repair.
- **We** then ship the part back to you or your customer. Turn-around time is usually 2-3 days, not including shipping (overnight and round-trip shipping options available).
